

THE TIMES & TIDES OF JOHN DAVIS (1550–1605)

SELECTIONS

from

The Voyages and Works of John Davis the Navigator

THE original 1880 publication of *The Voyages and Works of John Davis the Navigator*, more often than not restricted to Special Collections and Rare Book Departments, etc., is currently available on the Internet as a large, graphics-based *Google Digital* PDF file. Because of its sheer size, however, the various topics in this 515-page volume may still tend to overwhelm the casual reader, especially in this particular format. For this reason selected segments from the above are provided here in smaller, searchable PDF files that retain the original antiquated English text, typesetting and pagination.

The choice of material, however, does not center on the voyages of John Davis *per se*, but on his use of the heliocentric concept and the impact of this understanding on the development of Elizabethan navigation in general. Thus, in addition to *The Worlde's Hydrographical Description* (1595) and *Seaman's Secrets* (1594, 1607) by John Davis himself the selection includes the short "Note on the New Map" of A.D. 1600 by Charles Henry Coote (1880) and the extensive *Bibliographical List of Works on Navigation during the Reign of Elizabeth* (1880) prepared by Albert Hastings Markham.

Lastly, an additional supplement, *Introduction, Symbols and Abbreviations, and a Short Bibliography to Copernicus and Kepler* (1952) by Charles Glenn Wallis has also been included to provide a necessary background for the opposing geocentric and heliocentric planetary theories of the time.

WORKS BY JOHN DAVIS

- | | |
|--|----------------|
| <u><i>The Worlde's Hydrographical Description.</i></u> | (PDF; 256 kb) |
| <u><i>Seaman's Secrets</i> Book I. (Degrees, Times, and Tides, etc.).</u> | (PDF; 1.33 mb) |
